

CYKEL

CYKEL is a cycling super-app that unifies navigation, safety, tracking, tax automation, marketplace, family, and community features into one platform built specifically for urban cyclists in Denmark.

The Problem

What challenge are we addressing?

Urban cyclists currently rely on multiple fragmented apps for navigation, ride tracking, tax reporting, safety, marketplace transactions, repair services, and social cycling experiences. Existing platforms are either generic, fitness-focused, or not localized for the real daily cycling experience in Denmark. This fragmentation creates friction, lower safety, poor convenience, and missed opportunities for users and local cycling businesses.

Our Solution

CYKEL is a Denmark-first cycling super-app designed to become the digital operating system for urban cycling. The platform combines smart bike navigation, ride tracking, tax automation, marketplace capabilities, repair and charging services, safety tools, family tracking, and community experiences into one unified mobile application.

CYKEL combines the entire cycling ecosystem into one seamless platform. Users can navigate with bike-first smart routing, automatically calculate SKAT commute deductions, track rides, join events, access family safety features, connect with service providers, buy and sell bikes, and manage their cycling lifestyle through a single application optimized for Denmark's urban cycling culture.

- CYKEL combines the entire cycling ecosystem into one seamless platform
- Users can navigate with bike-first smart routing
- automatically calculate SKAT commute deductions
- track rides
- join events
- access family safety features

Market Opportunity

TAM • SAM • SOM

TAM: €28B global cycling digital ecosystem

SAM: €8.4B European urban cycling market

SOM: €420M long-term Nordic and Denmark opportunity

The market is rapidly expanding due to:
